Project Description

} ..

Project Description

The goal of the project was to build a functional banking application that runs entirely within the terminal.

MVP Features:

- **Secure Access:** Users must be able to register and login using a unique `Account ID` and `PIN`.
- **Balance Management:** Users can check their current account balance at any time.
- **The Transaction Engine:**
 - **Deposit:** Add funds to an account.
 - **Withdraw:** Remove funds (the system must prevent overdrawing!).
 - **Transfer:** Move money securely between two different accounts.
- **Audit Trail:** Users can view their recent transaction history.
- **System Logging:** The application must maintain a log file to track activity. You are required to use:
 - **INFO:** To record successful actions (e.g., "User successfully logged in").
 - **ERROR:** To record failures or security risks (e.g., "Incorrect PIN entered" or "Database connection lost").
